

Mark Lorenze Ponciano

A bookkeeper who builds the data pipelines behind the finance

marklorenzeponciano@gmail.com · linkedin.com/in/mark-lorenze-ponciano-075271278 · Remote (Philippines, GMT+8)

Xero Advisor Certified · Dext Certified Expert

SUMMARY

A certified bookkeeper who builds the data pipelines behind the finance. I design schemas, normalize sources that never agree, and ship scheduled reconciliation and reporting pipelines, in Apps Script, JavaScript, Node and PHP, on a MySQL data model I designed. I reconcile at scale, including records with no join key, wire whole stacks together so the numbers stay right and self-updating, and use AI coding tools daily while staying strict about where they belong in a system that has to tie to the penny. The finance domain most engineers lack, and the engineering most bookkeepers lack.

WHAT I WORK WITH

Languages & data: Apps Script, JavaScript, Node, PHP, SQL, MySQL (schema design), Google Sheets / Excel modeling

Pipelines & automation: Scheduled ETL, data normalization, entity resolution & dedup, reconciliation, variance / exception flagging, Make.com, API & webhook integrations

Finance: Xero (Advisor Certified), Dext (Certified Expert), multi-entity reconciliation, AP automation, GST / VAT, payroll

Integration stack: GoHighLevel, Brevo, CloudConvert, Google Calendar, Google Workspace / Apps Script, WordPress / SiteGround

Web & deploy: React, Supabase, Vercel, GitHub, AI-assisted development, LLM APIs

EXPERIENCE

Systems & Automation Manager, UK Street-Food & Events Company (Remote)

Feb 2026 – Present

Finance operations for a multi-venue events caterer, and the systems that run them

- **Built the operating platform:** designed a MySQL schema I own as the single source of truth, with GoHighLevel, WordPress, Brevo, CloudConvert, Google Calendar and Xero all mirroring it, so a booking flows from enquiry to quote to invoice to payment with no re-keying. PHP and JavaScript, built with AI coding assistants.
- **Scheduled reconciliation pipeline:** built an Apps Script pipeline for matchday payroll and sales that ingests form submissions on a timer, resolves inconsistent names to a canonical roster, de-duplicates with audit logging, rate-calculates pay, and reconciles hours against the posted schedule with variance and duplicate-payment flags. Cut about half a day of manual work per event.
- **Reconciliation and controls:** reconciled the weekly P&L's cost configuration against Xero and surfaced about £80k a year in unaccounted costs, so profit had been overstated by the same. Added POS analytics and a keep-or-switch supplier cost analysis.
- **Shipped an inherited product:** took an unfinished SEO audit web app (React, Node, Supabase, Vercel) to production as a live, secured tool.

Bookkeeper, Confidential Multi-Practitioner Medical Clinic (Remote, AU)

Jan 2025 – Dec 2025

40-practitioner superclinic: reconciliation and billing

- **Reconciliation pipeline:** built an Apps Script pipeline reconciling ~15,000 transaction lines a month from Best Practice against the GPs' bank statements. Normalized the export first, then matched across a dozen payment rails (EFT, Medicare, DVA, WorkCover, HICAPS, credit card, deposits, cash): ~80% matched outright, ~15% pre-matched, and the hard ~5% flagged for review, including WorkCover records with no direct reference to match on. Ran monthly for the year; handed over without friction.
- **Revenue assurance:** during a billing-model change that occasionally double-paid providers, cross-referenced the payments export against the service export to pin each provider's true overpayment, about \$8K across 40 accounts, and set up a painless installment recoupment.

Assistant Bookkeeper, AU Hospitality Group (Remote)

Jan 2023 – Jun 2024

Multi-entity accounts payable

- **Automated AP ingestion:** automated accounts-payable ingestion across five café entities using Xero and Google Workspace rules, routing supplier invoices from Gmail into the right Xero organisation and cutting 15 to 25 manual entries a day.
- **Multi-entity AP:** managed accounts payable end to end across 5 standalone Xero organisations, each with its own suppliers, feeds and reconciliation workflows.

CERTIFICATIONS & EDUCATION

Dext Certified Expert (Dext, Jan 2026) · **Xero Advisor Certified** (Xero, Jan 2026)

Bachelor of Science in Psychology, New Era University, Philippines (2024). Concentration in Quantitative Research and Statistical Analysis.
