

Mark Lorenze Ponciano

Xero Advisor Certified · Dext Certified Expert · marklorenzeponciano@gmail.com · LinkedIn

Summary

Helps SMBs get on top of the admin and backend chaos that's holding them back, turning messy books, manual work and disconnected tools into clean systems that mostly run themselves. A Xero Advisor and Dext Certified bookkeeper who grew into a **Systems and Automation Manager**: recovered **\$8K** in billing errors, ran the books across **40 providers**, systematised a company's matchday operations in **three weeks**, and built the live platform that runs its bookings, invoicing and payments. Goes in, works out what's broken, and makes it run.

What I work with

Accounting & Finance: Xero (Advisor Certified) · Dext (Certified Expert) · Best Practice (medical billing) · AP automation · Multi-entity & multi-ledger reconciliation · GST / VAT · Payroll

Automation & Systems: Data modelling & SQL · Make.com (Monday.com, Xero, CloudConvert) · API & webhook integrations · Google Sheets / Excel modelling · AI-assisted development · HTML / CSS · BigQuery (evaluated)

Web & Deployment: GitHub · Vercel · Supabase · WordPress · SiteGround

Hospitality & Ops: Square (POS) · MarketMan (inventory / COGS) · Rotaready (rostering) · Uber Eats & Deliveroo · Monday.com

AU Compliance: GST verification & invoice reconciliation · WorkCover (QLD, NSW) · HICAPS processing · Medicare bulk-billing

Experience

Systems & Automation Manager, UK Street-Food & Events Company (Remote)

Feb 2026 – Present

Finance operations for a multi-venue events caterer, and the systems that run them

- **Built the operating system:** designed and built a live, database-backed system that runs the company's bookings, quoting, invoicing and payments from end to end, wired to Xero, email and calendar.
- **Quote-to-invoice automation:** before the company even had a CRM, built its first automated quote-to-invoice pipeline in Make.com, connecting Monday.com, Xero and CloudConvert so enquiries became invoices on their own.
- **Matchday finance automation (fast win):** within three weeks of joining, built a multi-page living Google Sheet that handled stadium food-sales intake and subcontractor matchday payroll automatically, changing how the team ran matchday finance.
- **Weekly finance rhythm:** ran multi-currency VA payroll (USD to GBP), weekly P&L checks, and event-sales-to-Xero invoicing across several stadium concessions, week in and week out without a gap.
- **Reconciliation and controls:** reconciled the weekly P&L's cost configuration against Xero and found about **£80k a year** (annualised) in costs the model was quietly missing, which meant profit had been overstated by the same amount. Also ran POS analytics on discounts, voids and price/COGS integrity to catch control gaps and revenue leakage, and delivered a supplier cost analysis with a keep-or-switch recommendation when a new vendor bid.
- **Shipped an inherited product:** took over an SEO audit web app a departing colleague had left unfinished and got it into production as a live, secured, company-owned tool (React, Supabase, Vercel), including swapping a placeholder metric for real performance data.

Bookkeeper, Confidential Multi-Practitioner Medical Clinic (Remote, AU)

Jan 2025 – Dec 2025

Multi-provider ledger management

- **Revenue assurance:** during the clinic's billing-model transition, the overlap of old and new methods occasionally double-paid providers in the same week. I solved the "who owes what" by cross-referencing the payments export against the service export to pin each provider's true overpayment, about **\$8K** across 40 accounts, then set up a painless recoupment that clears each balance through small installments on the weekly clinic-fee invoice, rather than a lump-sum clawback.
- **Service-fee billing and receivables:** ran the weekly billing cycle for 40 GP and allied-health practitioners, issuing Xero tax invoices on gross billing splits, keeping facility fees and GST accurate, and managing accounts receivable across the practice.
- **Reconciliation and controls:** built reconciliation scripts that matched or pre-matched about 95% of transactions, so manual review could focus on the ~5% high-risk items (WorkCover QLD, icare NSW, patient refunds, HICAPS variances). Kept a daily rhythm, with weekly variance reporting and monthly ledger sign-off.

Multi-entity accounts payable

- **Automated AP ingestion:** built rule-based invoice routing from Gmail into Xero that identified, labelled and archived suppliers automatically, cutting out manual entry of 15 to 25 supplier invoices a day across five venues.
- **Multi-entity AP:** managed accounts payable from end to end across 5 café entities, each a standalone Xero org with its own suppliers, feeds and reconciliation workflows.
- **Reconciliation:** reconciled supplier statements weekly to keep GST clean and records audit-ready, and reconciled POS reports against bank deposits daily.

Certifications & education

Dext Certified Expert (Dext, Jan 2026) · **Xero Advisor Certified** (Xero, Jan 2026)

Bachelor of Science in Psychology, New Era University, Philippines (2024). Concentration in Quantitative Research and Statistical Analysis.
