SUMMARY

Xero and Dext certified bookkeeper with three years of remote work for UK and Australian businesses: multi-entity accounts payable, high-volume bank and payment reconciliation, provider billing, payroll and weekly profit reporting. I automate the repetitive parts, so the books stay accurate with less manual work. Open to full-time, part-time and project work.

SKILLS

Bookkeeping: Xero, Dext, bank reconciliation, accounts payable and receivable, multi-entity books, payroll, GST and VAT, weekly P&L reporting, provider billing

Industry systems: Best Practice (medical), Square, SevenRooms, Uber Eats, Deliveroo, MarketMan, Rotaready, GoHighLevel, monday.com

Automation: Google Sheets and Apps Script, Xero rules, Make, Google Workspace

Ways of working: Remote desktop and VPN access to client systems; UK, US and AU hours

EXPERIENCE

Bookkeeper, later also Systems and Automation Manager, UK events caterer and its sister restaurant (remote)
Feb 2026 to Oct 2026

- Found about £80,000 a year missing from the weekly profit report by reconciling its cost settings against Xero; profit had been overstated by the same amount.
- Kept the sister restaurant's books: bank and SevenRooms deposits reconciled in Xero; Square, Uber Eats and Deliveroo sales and fees in the P&L; supplier credit notes chased in MarketMan.
- Automated matchday payroll in Google Apps Script: one name per worker, duplicate shifts caught, hours checked against the posted rota, pay built overnight. Replaced a whole morning of checking after every game.
- Hired to keep the books; within two months the role grew to include the business's systems and automation, with the bookkeeping continuing alongside.
- Designed and built the booking system the business runs on, in PHP and JavaScript: a MySQL database as the single record, with GoHighLevel, WordPress, Xero, Google Calendar, Brevo and CloudConvert all updating from it. Booking stages are derived from events, never typed in.

Bookkeeper, GP Bookkeeper, placed with a multi-practitioner medical clinic in Australia (remote)
Jan 2025 to Dec 2025

- Reconciled about 15,000 transaction lines a month from Best Practice against payments received, across nine payment types with no shared ID (Medicare, DVA, WorkCover, HICAPS, EFT, card, cash and more).
- Produced the weekly report and invoiced each GP the clinic's share, a set percentage of the services they had billed.
- Identified about A$8,000 in double payments to providers that the clinic knew about but couldn't trace, by cross-checking a year of reports, and recovered it in small weekly instalments.
- Built a reconciliation engine in Google Apps Script: about 80% matched automatically, 15% needed a quick confirmation and 5% went to a person. A month of matching by hand became a Monday morning.

Assistant Bookkeeper, Australian hospitality group, five cafes (remote)
Jan 2023 to Jun 2024

- Ran accounts payable end to end across five standalone Xero organisations, each with its own suppliers, bank feeds and reconciliation.
- Routed supplier bills automatically from the shared mailboxes to the right cafe's Xero, with rules specific to each organisation, cutting 15 to 25 manual entries a day.

CERTIFICATIONS AND EDUCATION

Xero Certified Professional, Level 2 | Dext Certified Expert (both Jan 2026)

BSc Psychology, New Era University, Philippines (2024). Concentration in quantitative research and statistical analysis.
